Key Takeaways:

This IndustryARC report on the Cockpit Display Market highlights the following areas –

- Cockpit Display simplifies aircraft operation and navigation and allows pilots to focus only on the most pertinent information.
- Cockpit Display systems consist of several displays which are connected to the flight management system and can be altered to display flight information as required.
- The advantage to a Cockpit Display over traditional cockpits is that the automation systems are

more accurate, the information is more precise and the data is displayed more ergonomically.

- North America is projected to hold a significant share in the global Cockpit Display market. This is due to early technology adoption and they have a robust military industry.

Segmental Analysis:

By Aircraft Type:

Cockpit technology has been advancing at a great pace in the last few years. It helps to provide a great amount of information at the fingertips of the pilot than conventional systems. Military helicopters have most advanced high-tech machines and focus on incorporation of Cockpit Displays to enhance their effectiveness such as in navigation systems, electronic flight instrument system.

By Display Type:

Primary Flight display is forecast to grow at the highest rate of 6.0% through 2026. Primary flight display or PFD is a modern aircraft instrument dedicated to flight information. Glass Cockpit Displays are equipped with primary flight and multi-function displays. Primary flight displays comes in round, oval, horizontal, vertical and strip displays for airspeed, altitude and heading primarily through navigation systems and electronic flight instrument system.

By Geography:

North America is projected to grow at the highest CAGR of 5.1% during the forecast period 2021-2026. This is due to early technology adopters and additionally North-America has robust military industry.
