

# Drinking Water Market Size to Boost \$426.3 billion By 2027 | CAGR 6.5% - IndustryARC

*The Rising Concern Among Consumers Towards Their Health Has Readily Aided The Market Growth.*

HYDERABAD, TELANGANA, INDIA, January 31, 2023 /EINPresswire.com/ -- IndustryARC, in its latest report, predicts that [Drinking Water Market](#) size is estimated to reach \$426.3 billion by 2027, growing at a CAGR of 6.5% during the forecast period 2022-2027.

Drinking water can be derived from a variety of natural sources, including groundwater, surface waters (lakes and rivers), and the ocean. Suspended sediments, bacteria, and hazardous compounds must be absent from drinking water. Drinking water is necessary for life owing to its ability to improve standing blood pressure and orthostatic tolerance in a large subgroup of patients with autonomic failure. Water ingestion is particularly useful in the morning before arising with or without the addition of pressor drugs. Patients with supine hypertension should avoid water drinking within one hour before bedtime. The effects of pressor agents, such as pseudoephedrine and phenylpropanolamine, are potentiated by water drinking. Ideally, drinking water should be clear, colorless, and well aerated, with no unpalatable taste or odor, and it should contain no suspended matter, harmful chemical substances, or pathogenic microorganisms.
