The development of wireless charging facilities for electric vehicles is the greatest opportunity for both OEMs and end-users. Wireless charging enables charging of an electric vehicle without any inconvenience of finding the right cable connector at the charging point and/or stopping by

at any charging station. Wireless charging uses dynamic and inductive charging technologies where the electricity is transferred from one magnetic coil in the charger to a second magnetic coil connected to a car. Because OEMs and technology companies discovered that a wireless charging system is far more convenient than a plug-in system for charging an electric vehicle. Qualcomm's technologies are continuously working on its wireless charging system called Qualcomm Halo that uses dynamic technology that helps to charge the electric vehicle while driving. Therefore, the wireless charging system has huge scope in the future to electrify vehicles all over the world.
