Microgreens refer to small plants between sprouts and baby greens in height, standing 1-3 inches (2.5-7.5 cm) tall. Microgreens can be grown from various seeds and are particularly convenient to grow because they can be grown anywhere, including outside, in greenhouses, and even on your windowsill. They come in various colors and textures, fragrant flavor, and contain concentrated nutrients. Compared to their more developed counterparts, they frequently have higher levels of vitamins, minerals, and antioxidants. The stems and leaves of microgreens are the only edible parts, making them more comparable to baby greens. Microgreens are used in various cold and warm recipes and are consumed raw, juiced, or blended.
