

Polyphenols Market worth \$2.12 billion by 2026 at a growth rate of 6.4% - IndustryARC

Polyphenols are naturally occurring plant compounds found in plant-based foods such as several fruits and vegetables

HYDERABAD, TELANGANA, INDIA, February 7, 2023 /EINPresswire.com/ -- IndustryARC, in its latest report, predicts that the [polyphenols market](#) size is estimated to reach \$2.12 billion by 2026, growing at a CAGR of 6.4% over the forecast period of 2021-2026. Polyphenols are naturally occurring plant compounds found in plant-based foods such as several fruits and

vegetables. Regular consumption of polyphenols has been proven to provide medical benefits such as better digestion, improved brain health while substantially reducing the risk of developing type-2 diabetes. Polyphenols are found in different fruits, such as pomegranate, which has immense quantities of ellagitannins - a bioactive polyphenol. Similarly, tannic acid is a water-soluble polyphenol, which has been found predominantly in plenty of plant-based foods. The discussed polyphenol is responsible for decreasing food intake while also providing qualities of antioxidants. Phenolic acids constitute about 30% of the total polyphenols known to humankind. Stilbenes and lignans are some of the prevalent phenolic acids found in fruits, vegetables, and seeds. Flavonoids constitute the other 60% of the total polyphenols. Flavonoids include quercetin, kaempferol, and catechins popularly found in apples, onions, cocoa, and red cabbage. The polyphenols industry outlook is placed favorably owing to its inclusion in the functional food domain, as it offers benefits beyond the essential nutrients one needs. Moreover, the US FDA's inclusion of polyphenol in GRAS or Generally Recognized as Safe will help the beverage and food industry broaden its product portfolios. The following reasons, along with the changing dietary preferences, will help the polyphenol market share to improve.
