Indoor agriculture is simply the practice of growing food crops in a controlled environment so that they can be produced year-round with a high level of productivity. Farmers are turning to indoor farming as a result of rising food demand and declining agricultural food output. The decline in fertile land, poor meteorological conditions, and restrictions on the use of natural resources are the main causes of the decline in agriculture production. Due to these problems, conventional farming cannot meet the need of the expanding population. For instance, the United Nations (UN) projects that the 7.6 billion people who currently live on Earth will increase to 9.8 billion by 2050 and 11.2 billion by 2100. (UN, 2017). Due to advantages like increased farming land productivity; protection from extreme weather conditions; more effective use of productive resources; and reduced risk of pests, weeds, and crop diseases; greenhouses and indoor vertical farming are primarily used farming practices for the production of microgreens. Further encouraging farmers to adopt farming is the rise in technological advancements in

indoor farming, including the resurgence of information technology in vertical farming and greenhouses, which indirectly supports the [Broccoli Microgreens Market](#) Growth over the course of the forecast period.

One of the newest innovations in indoor farming is indoor vertical farming. The majority of farmers are ignorant about this technique and the crops that can be grown with this style of farming. Different technologies, including sensor, artificial intelligence, automatic systems, hydroponic, aquaponic, and aeroponic systems, are used in vertical farming and greenhouse farming. It takes a qualified and skilled workforce to operate these cutting-edge systems. Technically trained individuals are also needed for machine and computer maintenance. Vertical farming is not an exception to how many sectors have been impacted by a lack of skilled labor on a worldwide scale. Additionally, the majority of farmers enter this market using their expensive, inefficiently designed systems. The types of microgreens are quite limited. Broccoli microgreens are still not included in the range of vegetables because there are many different types and species of vegetables. These elements are anticipated to limit market expansion.

The players included in the Broccoli Microgreens Market Analysis have adopted product launch and business expansion as their key developmental strategies to expand their Broccoli Microgreens Market Share, increase profitability, and remain competitive in the market. The key players profiled in this report include AeroFarms, Fresh Origins, Gotham Greens, Madar Farms, 2BFresh, The Chef's Garden Inc., Farmbox Greens LLC, Living Earth Farm, GoodLeaf Farms, and Bowery Farming.
