

Essential Oils Market : Highly oxygenating and are suitable for infants | Biolandes, Sydney Essential Oils Co. Pty Ltd.

Application of essential oils as a food preservative is expected to open avenues for growth for essential oils as the demand for natural preservatives increases

PORTLAND, OR, UNITES STATES,
February 9, 2023 /EINPresswire.com/ --

The Global [Essential Oils Market](#) report is studied on the basis of product, application and distribution channel. By product, the market is divided into essential oils are segmented into

orange, eucalyptus, cornmint, peppermint, citronella, lemon, lime, clove, spearmint, and others. By application, the market is divided into food & beverages, medical, cleaning & home, spa & relaxation, and others. By distribution channel, the market is studied across direct distribution, MLM distribution and retail distribution.

The essential oils market was valued at \$10,886.50 million in 2020, and is estimated to reach \$24,735.11 million by 2030, growing at a CAGR of 8% from 2021 to 2030.

Essential oils are generally extracted by distillation process, often by using steam. Other processes used in the production of essential oils are expression, solvent extraction, absolute oil extraction, cold pressing, and resin tapping. Essential oils find usage in perfumes, cosmetics, soaps, and various other products, for flavoring food & drink, and for adding scents to incense and household cleaning products. Essential oils are distinguished from the fatty vegetable oils, such as canola and sunflower, by the fact that they evaporate or volatize in contact with the air and usually possess a strong aroma.

These products are complex mixtures of organic chemicals, the nature and relative proportions of which are determined by the genetics of the plant species, environmental factors (e.g. climate), agricultural factors (e.g. soil conditions, nutrition, time and conditions of harvesting and methods of post-harvest handling), and manner of extraction. The chemicals present in essential oils may be classified as follows:

- Hydrocarbons of the general formula $(C_5H_8)_n$ -terpenes
- Oxygenated derivatives of these hydrocarbons
- Aromatic compounds having a benzenoid structure
- Compounds containing sulfur or nitrogen

Essential oils are prized for their therapeutic properties and in the recent times it has been found that they are very effective as food preservatives. The application of essential oils as a food preservative is expected to open avenues for growth for essential oils as the demand for natural preservatives increases.

Over the last few years, consumer awareness regarding herbal products and food is on the rise. Most of the packaged food that is available in the market contains a variety of chemicals, some of which are very harmful to health, such as preservatives and flavor additives. Some preservatives are also linked with unfavorable effects, which can comprise unpleasant reactions in consumers that are sensitive to a particular preservative or a potential increased risk for cancer. In such a situation, going herbal with products having no pesticides, chemicals, or processed additives and picking natural, herbal food to minimize risk of disease, illness, and disorders is the new trend. Many consumers are avoiding chemical ingredients in their food, health food, functional food, proteins, and nutraceutical products. Hence, demand for naturally sourced ingredients such as essential oils in nutraceuticals is increasing continuously. This demand is mainly increasing in developed regions of North America and Europe as consumers in this region are spending more on natural products compared to consumers in other regions. Hence, the trend of using natural ingredients in the nutraceutical industry is proving one of the major factors to propel growth of the market.
