New Research Study ""Laparoscopic Power Morcellators Market 2023 analysis by Market Trends (Drivers, Constraints, Opportunities, Threats, Challenges and Investment Opportunities), Size, Share and Outlook"" has been added to Coherent Market insight

While laparoscopic power morcellators may seem like an oxymoron, they are actually FDA-approved tools used in gynecologic surgery. The US Food and Drug Administration (FDA) has issued guidance for the use of these tools, which includes proper patient selection and legal use of a tissue containment system. The FDA has updated its Safety Communication for laparoscopic power morcellation, which recommends the use of a tissue containment system and performed in a well-selected patient population. The FDA has warned that laparoscopic power morcellation could lead to an increased risk of uterine cancer, especially in women who are not diagnosed. Furthermore, the use of power morcellators may shred the cancerous tissue, increasing its stage from stage 1 to stage 4. Because of this, it is extremely difficult to treat, which decreases a woman's chances of a long life.
