A video management system refers to a video management server that contains a security camera system that helps to collect the videos from cameras. The video management system is crucial because it keeps track of every system and offers a quick overview, alerting security to any potential dangers, threats, occasions, or planned tasks. It includes cameras, servers for video processing and storage, and encoders for analog cameras. The video management system helps users to monitor events from any surveillance such as CCTV cameras, alarms, and sensors.
