

Business Reporter: Connecting IoT providers directly with international roaming partners

How new technology and processes can enable a roaming system designed specifically for IoT

LONDON, UNITED KINGDOM, February 15, 2023 /EINPresswire.com/ -- In an article published on Business Reporter, Comfone explains how a roaming hub and a new roaming standard geared towards international IoT services could help cut out home operators and make the deployment of IoT systems more cost efficient and transparent across country borders. The networks that international IoT providers need to rely on today are mostly designed for human roaming activities. Neither IoT system providers, nor visited network providers can really benefit from it. This is particularly true in the case of static IoT devices, where their operation incurs permanent roaming charges. Thanks to the model being opaque, the visited network providers of home operators have no visibility of the global IoT projects that use their network free of charge.

By cutting out home operators, IoT providers can get direct access to the services of international operators offering them the best terms, as well as have control over how they distribute their traffic across various networks. This model can also give international roaming service providers granular visibility of who are generating IoT traffic on their networks. The transformation to this new model, however, needs to be accompanied by the streamlining of settlement and clearing processes too for partners to achieve flexibility and better cashflow. Comfone, the company with the largest international footprint, has been championing this transformation at GSM Association level and is also at the forefront of the propagation of new standards.

Comfone

Comfone is a market leader in international roaming services, with the mission to provide borderless and easy communications to all people and all things. Within the international roaming industry, Comfone is unique for the breadth of its portfolio, the Key2roam Platform, and for the reach of its international roaming hub, the Key2roam Hub. The company supplies a complete portfolio of all services needed for the establishment of an international roaming footprint, across technologies and specialities, including IPX services for connectivity, Data Clearing and Financial Clearing for settlement between roaming partners, as well as Big Data Management Service and applications for the identification, the monitoring and hence the monetisation of all kinds of roaming traffic. Comfone's Key2roam hub offers 5G roaming, LTE and VoLTE roaming, as well as Roaming Relations Management Services.
