Diabetic neuropathy is a serious and common complication of type 1 and type 2 diabetes. Diabetic neuropathy is the damage caused to the nerve due to diabetes which often leads to pain and numbness in feet or lower leg, it develops slowly, sometimes over the course of decades. The pain can be experienced in other parts of the body such as hips, wrist and back depending upon the effect of neuropathy. There are different types of neuropathy such as focal neuropathy, proximal neuropathy, peripheral neuropathy and autonomic neuropathy. Peripheral neuropathy is the most common form of neuropathy. Over time, high blood glucose levels, also called blood sugar, and high levels of fats, such as triglycerides, in the blood from diabetes can damage your nerves. High blood glucose levels can also damage the small blood vessels that nourishes the nerves with oxygen and nutrients. There is no cure for diabetic neuropathy but the nerve pain can be managed with medication and exercise.
