Trending Anti-Hypertensive Drugs Market Trend

Of late, there has been a rise in the use of combination therapies compared to monotherapy treatment. Monotherapy is the treatment of hypertension with a single drug, while the use of combinations of drugs (Combination Therapy) allows for action on several different hypertensive mechanisms. When the two drugs are combined with different mechanisms of action, the effect is two to five times greater than monotherapy. Increasing the dose of monotherapy reduces

coronary events by 29% and cerebrovascular events by 40%, while combining two antihypertensive agents with a different mechanism of action reduces coronary events by 40% and cerebrovascular events by 54%. Thus, the use of combination therapy provides greater protection to a target organ than increasing the dose of monotherapy. The trend of using combination therapy is thus more effective and is being widely accepted as well.

Anti-Hypertensive Drugs Market Segments

- By Therapeutics: Diuretics, Angiotensin Receptor Blockers (ARBs), Angiotensin Converting Enzyme (ACE) Inhibitors, Beta Blockers, Alpha Blockers, Calcium Channel Blockers, Renin Inhibitors, Vasodilators
