The offset printing technique is the most widely used printing technology for a wide range of applications such as book notes, packaging, marketing materials, and so on. Offset Printing can help with everything that needs to be printed. Newspapers, books, legal forms and documents, magazines, brochures, business cards, letterhead, catalogues, booklets, business forms, flyers, brochures, calendars, invitations, the packaging industry, and much more employ this printing process. Offset printing is frequently used in conjunction with lithographic printing. The paper in offset-lithography does not come into direct touch with the printing plate. The image is instead transmitted to a rubber roller. The method results in prints with rich, smooth solids that lack the streaking seen in lower grade prints.
