Intraoral scanners are digital devices typically used in dentistry to obtain direct optical impressions. These devices usually include a handheld camera wand, a computer, and software. Intraoral scanners are commonly utilized to scan teeth arches and prepare teeth and capture images of implant scan bodies. They offer numerous advantages, including accuracy, versatility, ease of use, and time efficiency. They also cause minimal discomfort and eliminate the need for traditional impressions or stone models of teeth. As a result of these benefits, intraoral scanners are widely used in hospitals and dental clinics.
