The key highlights of the report include:

Market Overview (2018-2028)

- Historical Market Size (2020): USD 3.99 billion
- Forecast CAGR (2023-2028): 5%
- Forecast Market Size (2028): USD 5.34 billion

Monosodium glutamate is a food additive that is commonly used in various dishes and packaged food items, such as chips, soups, stock cubes, barbeque sauces, gravies, ketchup, soy sauce, and canned beef, among others, as a taste enhancer. Over the projected era, Asia Pacific is expected

to see rapid growth, accounting for a large share of the market. Increased consumption of glutamate salts is being observed in the region, especially in the production of meat and other high protein food products. In Chinese and Japanese cooking, MSG is widely used to prepare a variety of dishes, particularly fast foods. The rising demand for packaged foods across the region and the booming food industry are contributing significantly to consumer growth. Business development is also fueled by the increased development of MSG in countries such as China, Indonesia, and Korea, among others.

Industry Definition and Major Segments

Sodium glutamate, also abbreviated as MSG (monosodium glutamate), is one of the food industry's most utilised flavour enhancers. That is the sodium salt of glutamic acid in chemical terms. MSG brings a special umami flavour to the taste of food items. It is also known by other names, including Ajinomoto, its trade name.
