Chronic hemodialysis catheter (also known as a tunneled hemodialysis catheter) is a type of medical device that is used for patients who require long-term hemodialysis treatment. Hemodialysis is a medical procedure used to filter waste and excess fluid from the blood of people with kidney failure.

A chronic hemodialysis catheter is a flexible tube that is inserted into a large vein in the neck, chest or groin and tunneled under the skin to provide long-term access for hemodialysis. The

catheter has two ports, one for the removal of blood from the patient and the other for the return of filtered blood to the patient's bloodstream.
