

# Donemax Has Launched Donemax Disk Clone for Mac 2.0 to Support Disk Clone on M1/M2 Chip Macs

*Donemax has come out with the handy tool Donemax Disk Clone for Mac 2.0, which supports the process of disk cloning on M1/M2 Chip Macs.*

CALIFORNIA, USA, March 6, 2023 /EINPresswire.com/ -- The need for disk cloning software is undeniable. It provides a convenient and efficient way to quickly and securely back up data, as well as clone entire hard drives. This is especially useful for those who need to upgrade to a larger hard drive, or for those who need to transfer data from one computer to another. The Disk cloning software of Donemax, [Donemax Disk Clone for Mac 2.0](#), is a valuable asset for any computer user, as it ensures that important data is not lost in the event of a system failure or other unforeseen circumstances.

The Donemax Disk Clone for Mac 2.0 helps support the process of disk cloning on M1/M2 chip Macs. This disk cloning software is an invaluable tool for any computer user, whether he is a professional or a casual user. It provides a quick and easy way to create a backup of a computer's hard drive, ensuring that important data is not lost in the event of a system crash or other hardware failure. This software can be used to quickly and easily transfer data from one computer to another, or to create an exact copy of a computer's hard drive for use in a virtual machine.

The disk cloning software can be used to create a virtual machine, allowing users to test out new software or operating systems without having to install them on their main computer. This can be especially useful for users who are looking to upgrade their operating system but want to make sure that their existing data is safe.

This is undeniably the [best disk cloning software for Mac](#), and is an invaluable tool for protecting data. It is essential for any user who wants to keep his data safe and secure, and to ensure that he can quickly and easily transfer data between computers.

One can make a bootable copy of his Mac's startup disc with the aid of Donemax Disk Clone tool. It can backup data and system under Mac by creating disc images, securely and quickly cloning macOS, and copying hard drive data. If macOS is unable to boot, users can resume work right away or take time upgrading to a new version of macOS.

They can create a bootable backup using Clone OS so as to be able to successfully boot their Mac from the copied disc. Or they can decide to make a disc image backup of the data. Users can download the Mac disc clone tool Donemax Disk Clone to do it on their own. To complete the process, they have to simply choose the destination and source discs. No expert knowledge is required to handle and use the tool. It supports Mac OS X 10.9 and later, including macOS 13 Ventura, and is compatible with Macs with T2 chips and M1/M2 based on ARM.

#### About Donemax
