[Trending Geophysical Services Market Trend](#)

Geophysical service providers are using drones to conduct aerial geophysical surveys. Estimating the variety of key physical or geochemical boundaries of the earth by means of air is conducted

through aerial/airborne geophysical surveying. Drones used for surveying are equipped with a magnetometer and other sensors such as electromagnetic, gamma-ray, spectrometry, magnetic, and gravity to get clear and productive results from the survey. In June 2020, Terremys, a startup company, launched a lightweight UAV (Unmanned Aerial Vehicles) magnetic survey technology which will allow multi-scale aeromagnetic surveys using a measuring system weighing less than 500 grams. AeroVision Airborne Geophysics (Drone-MAG) is an innovative product of Abitibi Geophysics which provides low-altitude aeromagnetic surveys, creating high-resolution data at regular intervals at a fraction of the cost of the ground mag.

### [Geophysical Services Market Segments](#)

- By Survey Type: Land, Marine, Aerial
- By Technology: Seismic, Magnetic, Gravity, Electromagnetic, Lidar, Ground Penetrating, Other Technologies
- By Application: Road, Rail, Port, Airport, Pipeline, Other Applications
- By End User: Agriculture, Environment, Minerals and Mining, Oil and Gas, Water Exploration, Other End Users
- By Geography: The global geophysical services market is segmented into North America, South America, Asia-Pacific, Eastern Europe, Western Europe, Middle East and Africa.
