Solid Recovered Fuel Market Overview

Solid recovered fuel is a high-quality alternative to fossil fuel produced from commercial waste such as card, paper, wood, textiles, and plastic. With a moisture content of less than 15%, solid recovered fuel has a high calorific value

and is used in the facilities such as cement plants, lime plants, coal-fired power plants, and CHP, among others. In addition, one ton of coal is equivalent to approx. 1.5 tons of solid recovered fuel. Therefore, the low cost of SRF coupled with high calorific value is one of the key factor driving the growth of the market.
