

LPA announce VisiRule chatbot integration with GTP to provide AI chatbots

VisiRule charts can contain multiple scripts which guide the user conversation to a conclusion whilst still answering ad-hoc random queries.

“

The integration of GPT and VisiRule means no question is unanswered. The combination of rules-based expert systems and GPT-AI makes for a very powerful combination.”

Clive Spenser

LONDON, UNITED KINGDOM, March 8, 2023

/EINPresswire.com/ -- VisiRule is a low-code no-code decision authoring tool which combines [expert systems](#) decision making logic, rule-based processing, mathematical computation and document generation.

VisiRule charts typically contain decision logic and associated calculations which can answer potentially complex questions which require specialist knowledge using a dynamically constructed sequence of questions, where each subsequent question depends on previous

answers.

VisiRule charts can be delivered as dynamic web-pages, embedded process rules or as interactive chatbots.

When delivered as chatbots, users are able to interrupt the normal sequence of questions and answers and pose their own questions at any time.

These are initially answered using Natural Language access to some pre-defined application-specific FAQ data, and now, if nothing matches, using GPT.

The result is a chatbot which can answer complex questions using scripts, specific questions via a local database, and general questions using GPT.

Clive Spenser, LPA stated: "The integration of GPT and VisiRule means no question is unanswered. The end user benefits from having an expert system ask questions to deliver an informed opinion about a specific issue, but, along the way, can answer almost any question, whether application or issue specific or quite general."

VisiRule is a flexible software package which enables non-programmers to develop solutions using their own expert knowledge. VisiRule combines the very best of expert systems, Business Rules, rapid prototyping, decision trees, flowcharts and document automation into one easy-to-use but powerful tool.

LPA is a small dedicated AI company in London, England which has been providing logic-based software solutions since it was formed in 1981. LPA products have been used in a wide-range of commercial and research applications including legal document assembly, financial compliance, risk assessment, policy automation, environmental engineering, medical disease diagnosis, fault diagnosis, product configuration and quotations.
