## Trending Diuretics Market Trend

A new drug delivery technology called the oral nanoparticle delivery technology is developed to improve the pH and intestinal permeability of the diuretic drugs to increase the digesting capability as the majority of these drugs have low water solubility and bioavailability. Drugs such as amlodipine and isradipine having low bioavailability (less number of solvents to get diluted)

and high light sensitivity were delivered using Nanoemulsion (dispersion that consists of oil, surfactants, and aqueous phase) as a drug delivery system. Pharmacokinetics (study of how an organism affects a drug) data of both the drugs revealed enhanced stability and bioavailability.
