There are several treatments for allergies, including:

**Avoidance:** The most effective way to treat an allergy is to avoid the substance that triggers it. For example, if you have a pollen allergy, stay indoors on high pollen days or wear a mask when you go outside.

**Medications:** There are many medications available to treat allergies, including antihistamines, decongestants, and corticosteroids. These can help relieve symptoms such as sneezing, runny nose, and itching.

**Immunotherapy:** This is a long-term treatment that involves exposing the person to small

amounts of the allergen over time, in order to help the immune system build up tolerance. This can be done through allergy shots or sublingual immunotherapy (SLIT), which involves placing a small amount of the allergen under the tongue.

**Emergency treatment:** For severe allergies, such as anaphylaxis, emergency treatment may be necessary. This can include epinephrine (also known as adrenaline) injections, which can quickly reduce swelling and prevent a life-threatening reaction.

## Drivers and Restraints

Drivers for a Allergy Treatment market refer to the factors that are expected to increase the demand or growth of a Industry. Examples of drivers can include increasing disposable income, population growth, technological advancements, and changes in government policies.

Restraints for a Allergy Treatment market refer to the factors that are expected to inhibit the growth or limit the demand of a particular market. Examples of restraints can include economic downturns, changes in consumer behavior, increased competition, and changes in government regulations.
