Airport Baggage Handling System Market by IMARC Group

The baggage handling system (BHS) refers to a conveyor system that is widely adopted to transfer checked luggage from the ticketing counters to airplane loading gates. It involves bag tracking, load balancing, volume regulation, and screening luggage for security reasons. The system utilizes numerous devices, such as barcode scanners, tilt tray sorters, radio frequency sensors, automatic jam readers (AJR), automatic tag readers (ATR), and vertical sortation units to provide efficient and transparent baggage handling to travelers and minimize the workload for the ground staff. Due to the rising demand for automation across the globe, there has been a considerable shift towards the adoption of fully automated and computer-guided airport baggage handling systems.
