Data acquisition is utilised in the dialysis market as a tool for managing vast patient data sets, and with the aid of the raw data gathered during the procedure, doctors and lab staff may make patient-centric decisions for accurately administering dialysis therapy. Data management has a wide range of uses, including supporting key business operations in hospitals like the billing process and treatment documentation in electronic health records. Other examples include patient monitoring, clinical data management, and patient monitoring. In addition to managing patient master data, laboratory results, findings, and diagnosis data from outside physicians, quality assurance is relevant for revising and archiving all treatment- and patient-related data, as well as for preparing the paperwork needed for quality assurance.
