

Solar Charging Station Market : EV charger, Solar panel array, Battery energy storage system Forecast, 2021-2031

OREGAON, PORTLAND, UNITED STATES, March 21, 2023 /EINPresswire.com/ -- According to a new report published by Allied Market Research, titled, "[Solar Charging Station Market](#)," The solar charging station market was valued at \$0.55 billion in 2021, and is estimated to reach \$2.9 billion by 2031, growing at a CAGR of 18.5% from 2022 to 2031.

Solar charging stations are specially designed charging stations which convert the solar energy to electricity thereby storing the same in the batteries located within the charging station or transferring the electricity to the power grid located at a distant position. In addition, solar charging stations are equipped with photovoltaic cells located above the station which convert the solar energy to electric energy through the photovoltaic reaction which leads to energy generation. Moreover, with the advancement in technology, solar charging stations across the globe have gained immense traction due to the on-grid & off-grid solar charging system which has supplemented the growth of the solar charging station market across the globe.

With the advancement in technology, numerous technology-driven companies such as Giulio Barbieri SRL, INHABIT Solar, MDT Sun Protection System AG and others have been inclined towards offering advanced solar charging stations which create ample opportunities for the growth of the global solar charging station market. For instance, in September, 2021, MDT Sun Protection System AG developed solar charging umbrellas which provide cheap and de-centrally generated green electricity for the charging infrastructure & charging facility for electric vehicles. Similarly, in September, 2022, PROINSO entered into partnership with H2T to develop projects in Northern Vietnam assisting the commercial and industrial sectors access lower cost and clean energy. Such developments have boosted the solar charging station market share thereby leading to the growth of the market across the globe.

Moreover, the market has been witnessing suitable growth in recent years, owing to an increase in investments carried by governments across the globe to enhance the electric mobility industry which has eventually increased the demand for charging stations to be present at frequent driving locations. This has created ample opportunities for the growth of the market across the globe. For instance, in September, 2022, Cherwell District Council invested in the Solarsense

Corporation for solar carport to reduce its carbon footprint & energy costs. Similarly, in January 2023, Enterprise Community Partners, Inc. (Enterprise) and DC Green Bank (DCGB) announced a \$12.4 million investment to install 2.2 megawatts of solar panels at four affordable housing properties in the district. Under these solar carports, rooftop solar panels and new electric vehicle charging stations are expected to be received in Enterprise's Edgewood Commons in Ward 5 and Overlook at Oxon Run in Ward 8. The project aims to reduce greenhouse gas emissions by up to 1,794 tons of carbon dioxide each year.

KEY FINDINGS OF THE STUDY :

By type, the large charging station segment is projected to dominate the global market in terms of growth rate.

By application, the commercial segment is projected to dominate the global anti-drone market in terms of growth rate.

By station type, the on-grid solar charging station segment is projected to dominate the global market in terms of growth rate.

By component, the battery energy storage system segment is projected to dominate the global market in terms of growth rate.

The key players operating in the global solar charging station market are Giulio Barbieri SRL, Inhabit Solar, MDT Sun Protection System AG, PROINSO, Solarsense UK Limited, Solarstone, Sundial Solar Solutions, SunPower Corporation, Sunworx solar, and VCT Group.

COVID-19 Impact Analysis :

COVID-19 pandemic ignited several challenges for the solar charging station infrastructure such as restrictions on business activities, travel and border closures have sharply reduced energy demand in transport and industry, decreasing the consumption of renewable energy. Electric vehicle infrastructure was one of the most severely affected industries by the pandemic and observed a decline of investments initially. Various solar charging station service providers were not able to recover from the losses incurred on account of the pandemic. Emerging macroeconomic challenges prompt cancellation or suspension of investment decisions for both large and small-scale projects under development.

About Us

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP based in Portland, Oregon. Allied Market Research provides global enterprises as well as medium and small businesses with unmatched quality of "Market Research Reports" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domain.

We are in professional corporate relations with various companies and this helps us in digging out market data that helps us generate accurate research data tables and confirms utmost accuracy in our market forecasting. Allied Market Research CEO Pawan Kumar is instrumental in inspiring and encouraging everyone associated with the company to maintain high quality of data and help clients in every way possible to achieve success. Each and every data presented in the reports published by us is extracted through primary interviews with top officials from leading companies of domain concerned. Our secondary data procurement methodology includes deep online and offline research and discussion with knowledgeable professionals and analysts in the industry.
