

Landfill Gas Market Showing Impressive Growth during Forecast Period 2021 - 2030

Landfill Gas Market Expected to Reach \$2.8 Billion by 2030

PORTLAND, OREGON, UNITED STATES, March 22, 2023 /EINPresswire.com/ -- The global [landfill gas market](#) size was valued at \$1.4 billion in 2020 and is projected to reach \$2.8 billion by 2030, growing at a CAGR of 7.4% from 2021 to 2030. The increase in the usage of portable electronic gadgets and electric energy source-based products has increased the demand for electricity.

The depletion and uneven presence of natural resources across the globe is one of the driving factors for the growth of the landfill gas market. The outbreak of the pandemic has led the energy industries and countries which depend on their energy on fossil fuel imports into a tight spot. Various governments have set their sights on renewable and cost-efficient methods to solve this problem to overcome the future crisis. The above-mentioned are the key factors that provide remunerative opportunities for the growth of the market across the globe.

The rapid development of reciprocating gas engines due to their application in multiple power generation equipment to provide backup generating capacity offers scalable and efficient solutions for commercial and industrial combined heat and power systems. The presence of plentiful natural gas supplies and relatively stable infrastructure in the U.S. is one of the factors driving the interest in reciprocating engines for industrial applications. The creative use of reciprocating engine technology includes not only power generation but also thermal and even captured emissions are gaining traction in some well-known countries. These factors provide ample growth opportunities for the growth of the landfill gas market throughout the forecast period.

Landfill gas production volume depends on several factors which include characteristics and external environmental factors. The most essential part of the landfill gas production process is the survival of the bacteria for the decomposition of organic waste. In addition, a drop in moisture level leads to retarded biological processes which is associated with biological decomposition. Also, it may also contaminate the soil and water, and the methane gas produced from the decomposition will light up in some rare conditions to cause problems. The above are various factors restraining the growth of the landfill gas market throughout the forecast period.

The global landfill gas market is segmented on the basis of application and region. The applications covered in the study include electricity, direct use, combined heat & power, and alternate fuels. Region-wise, the market is studied across North America, Europe, Asia-Pacific, and LAMEA. Presently, Asia-Pacific accounts for the largest share of the market, followed by Europe and North America.

The major companies profiled in this report include Waste Management, Inc., Covanta Holding Corporation, Veolia Environnement S.A, Pennon Group Plc., SUEZ SA, Kohler Co., Inc., Aria Energy Corp, Granite Acquisition, Inc., Vectren Corporation and Shanghai Chengtou Holding Co., Ltd.

Key players across the globe have plans to establish landfill gas production capacities to meet relative market share across the globe due to the rapid increase in demand for landfill gas.

Impact Of Covid-19 On The Global Landfill Gas Market

- The emergence of COVID-19 had a positive impact on the growth of the global landfill gas market for a short period.
- The unavailability of labor and improper transportation during this period has put various energy producers in a tight situation to meet the requirements of the consumers.
- The awareness among the people related to the environmental impact brought by landfill waste during this period has led to an increase in investment from the private and government sectors toward the construction of landfill gas plants.
- The increase in the presence of harmful gas such as carbon dioxide, methane, and also a breeding site for various harmful bacteria which can cause harmful diseases during this pandemic situation has shown a positive impact on the development of the landfill gas market.
- Thus, the abovementioned factors are expected to boost the global landfill gas market growth in current times.

Key findings of the study

- By region, the North American landfill gas market is projected to witness growth at the highest CAGR in terms of revenue, during the forecast period.
- By application, the electricity segment accounted for the largest landfill gas market share in 2020, as per landfill gas market analysis.

About Us

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP based in Portland, Oregon. Allied Market Research provides global enterprises as well as medium and small businesses with unmatched quality "[Market Research Reports](#)" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domains.
