Trending Thyroid Cancer Drugs Market Trend

Combination drugs are increasingly being used in the treatment of thyroid cancer as they are more effective and help prevent cancer progression. A combination drug includes two or more active pharmaceutical ingredients (APIs) combined in a single dosage form. These drugs reduce the development of drug resistance and prevent the growth of cancer cells. For instance, the FDA approved the combination of dabrafenib (Tafinlar), a BRAF inhibitor, and trametinib (Mekinist), a MEK inhibitor for the treatment of anaplastic thyroid cancer.

The thyroid cancer drugs refer to drugs that are used to treat thyroid cancer by blocking several different kinase proteins. These medications function primarily in two ways. First, they aid in preventing tumours from growing new blood vessels, which they require to do so. They target a few of the proteins that cancer cells often produce to aid in their growth. The thyroid tissue is made up of follicular cells and parafollicular cells in which cancer develops.
