Sports equipment are utility devices or tools useful for engaging in sports activity. Similarly, sports apparel is useful for boosting the sports performance with required comfort. Increase in fitness consciousness among consumers and rapid rise in per capita disposable income are expected to boost demand for sports equipment and apparels. In addition, trend of sports apparel among young sports enthusiasts and advancements in formulation of sports equipment fuel the market growth. However, decline in participation of the young generation in sports activity hampers the market growth.

Moreover, increase in interest of consumers in leisure activities other than sports such as movies, musical concerts, virtual gaming, and others restrains the growth of the market. Conversely, increase in participation of various organizations in donation of these equipment and apparel to emerging sport enthusiasts and athletes with poor financial background is anticipated to provide lucrative sports equipment and apparel market opportunities. For instance, Sports Gift, Let's Play It Forward, Global Sports Foundation, and One World Play Project are some of the well-known organizations that support the sports equipment donation process.

Thus, rise in distribution of sports equipment and apparel through online retail platform is anticipated to boost the sports equipment and apparel market growth in near future.

The market for sports equipment and apparel is quickly approaching the pre-COVID stages, due to the economic recovery in most emerging economies, and a stable growth rate is envisaged throughout the forecast period. The resumption of sport activities, and ease in international sport travel restrictions are key factor behind recovery of the sports equipment and apparel market. These factors are projected to boost the growth of sports equipment and apparel industry after the COVID-19 prediction period.
