Trending Smart Pills Market Trend

Extensive research and development are being carried out on the use of miniature chips such as Addressable Transmitters Operated as Magnetic Spins (ATOMS) which can be used as smart pills.

ATOMS are silicon chip devices that use the principle of magnetic resonance imaging (MRI) to determine the location of atoms in a patient's body using magnetic fields. ATOMS can be used in ingestible smart pills to diagnose and treat diseases from within the body. The devices can be used to monitor a patient's gastrointestinal tract, blood, or brain. They also could measure factors that indicate the health of a patient such as pH, temperature, pressure, and sugar concentrations, and relay that information to doctors. The devices could even be instructed to release drugs. For instance, scientists at Caltech (California Institute of Technology) have developed a miniature medical chip that can be used as a smart pill.
