An RF circulator is a three-port passive electrical device that permits signals to flow in only one direction through its ports. Circulators are used in microwave and radio frequency systems to route signals from one port to another while preventing the signal from escaping the device. An RF isolator is a device that shields RF components in a system from excessive signal reflection. It is a non-reciprocal two-port device that assures full power is delivered from port 1 to port 2. They protect sensitive components by placing RF isolators in front of sensitive components to prevent undesired signals from hurting sensitive components. They are used in RF circuit design to reduce unwanted reflection and in test and measurement in electronics, IT, telecommunications, and other industries.
