

Digital Inventory Now Also for the Home Office: Timly & SodaStream Bring Innovation to Market

Timly & SodaStream have developed an innovative solution for home office inventory. This function revolutionises the inventory process and saves companies time.

ZÜRICH, ZH, SWITZERLAND, March 29, 2023 /EINPresswire.com/ -- Every company is familiar with the annual inventory effort, which often takes up a lot of time and human resources. Since more and more companies also employ home office workers, another problem has been added: The IT devices that home office employees have at home can only be recorded for inventory with great difficulty and often unreliably.

Timly and SodaStream announce innovation for inventory management software

Therefore, the Swiss company Timly, together with its customer SodaStream - the world market leader for water sparkling systems for domestic use - has added an innovative function to the Timly [inventory management software](#): the "self-inventory".

“

Now we save a tremendous amount of time because it also only takes 2 minutes for the home office staff to confirm their assets.”

*Murat Tulgar, IT Manager
(SodaStream)*

SodaStream Faced Challenge With Home Office Situation

SodaStream was faced with the challenge of ensuring efficient management of the numerous IT assets at different locations as well as for employees in the home office. The previous inventory via Excel was time-

consuming and inefficient, which is why devices belonging to employees in the home office remained unaccounted for. It was difficult to determine which end device was with which colleague.

SodaStream then approached Timly and together they developed the practical new function. In keeping with the times, the inventory can now be easily implemented in the home office using QR code labels. The IT manager sends a message to all employees in the home office and they can scan their objects, such as laptop, keyboard or camera, comfortably at home with their smartphone. If this does not happen by a certain date, an automated reminder goes out to the respective employee.

Enormous Time Saving Through the "Self-Inventory"

This "self-inventory" is a great relief for companies in all sectors, especially in times of increased home offices, but also with different locations.

SodaStream's IT manager confirms the increase in efficiency for SodaStream in a new use case video and also provides insight into his experiences with the digital inventory software here:

"Now we save a tremendous amount of time because it also only takes 2 minutes for the home office employees to confirm their assets."

Murat Tulgar (IT Manager, SodaStream)

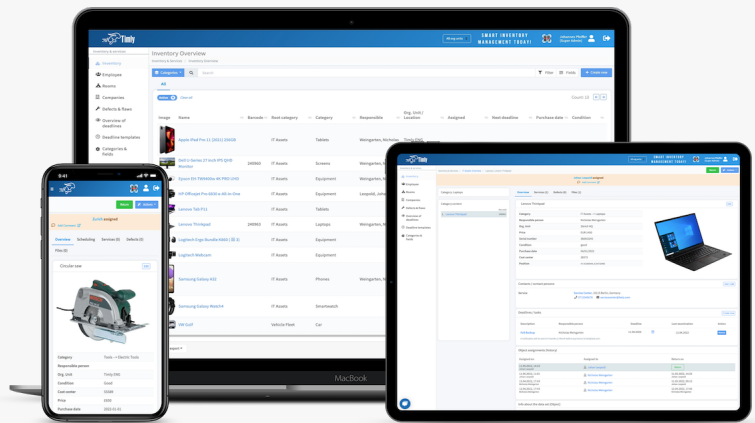

Shortly after its introduction, the new function of the Timly app is already very popular with existing customers. In the coming months, it is sure to become even more popular and make workflows easier for companies around the world.

With this solution, Timly Software AG has ushered in a new era for [asset management software](#), as inventory can now also be controlled digitally in the home office. Timly is available for information and reporting. A free trial of the Timly software is available on the website:
