A smart container is a shipping container with Internet of Things (IoT) technology, sensors, GPS tracking, and a solar panel. They are designed to regulate internal conditions (such as temperature), provide real-time GPS tracking, enhance security, and provide information about cargo conditions that will alert operators to potential problems. Using the information collected, digital shipment records are generated, which can be shared with customers for up-to-date tracking and utilized to predict arrival times at ports in order to optimize container unloading and distribution for the next phase.
