

Introducing Server Manager 2023: The Ultimate Solution for Data Normalization, Compliance and Security

KAMAS, UT, UNITED STATES, March 29, 2023 /EINPresswire.com/ -- We are thrilled to announce the release of the most advanced and versatile tool for managing and optimizing your IT infrastructure, [Server Manager 2023](#).

This cutting-edge solution comes equipped with a range of innovative features that address the critical needs of modern businesses, including [DATA NORMALIZATION](#), COMPLIANCE AND AUDITING, [SECURITY](#), and APPLICATION DEPLOYMENT.

“

Server Manager enables its users to data mine, extract and group log entry variable values, such as successful login events from Windows, Linux and switches, then graphically visualize results.”

Michael Janulaitis

DATA NORMALIZATION: Server Manager 2023 introduces fully customizable data normalization for any log, entry, or value. Corner Bowl empowers its customers to easily define log entry schemas, including data types, lengths, and indexes. The software optimizes SQL statements for maximum performance in big data environments and offers fully user-customizable charting for any value or group, exposing trends and enabling network administrators to address issues before users experience any problems.

COMPLIANCE AND AUDITING: Server Manager 2023 streamlines compliance reporting, auditing, approval, and rejection workflows, establishing Corner Bowl as the go-to software tool for both compliance and auditing processes.

SECURITY: Boasting fully customizable role-based permissions for system administration, monitoring, interrogation, and compliance auditing, Server Manager 2023 allows network administrators to provide the appropriate level of access to each of their users, ensuring a secure and efficient IT environment.

APPLICATION DEPLOYMENT: Simplifying application deployment has never been easier. Server

Founder Michael Janulaitis said, "Server Manager 2023 enables its users to data mine, extract, and group log entry variable values, such as successful audit login events from Windows Servers, Linux Servers, and switches, then graphically visualize results enabling managers to identify trends over time so they can make informed business decisions."
