Immunodiagnostics is a medical technique that involves the use of antibodies and antigens to diagnose and monitor diseases. It is based on the body's immune system, which produces antibodies in response to foreign substances such as bacteria, viruses, and other pathogens.

In immunodiagnostics, specific antibodies or antigens are used as markers to detect the presence of a particular disease or condition in a patient's blood, urine, or other bodily fluids. These markers can be detected using a variety of techniques, such as enzyme-linked

immunosorbent assay (ELISA), radioimmunoassay (RIA), or fluorescent immunoassay (FIA). Immunodiagnostics has a wide range of applications in medical diagnosis, including the detection of infectious diseases, autoimmune disorders, and cancers.
