Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent trades that encountered large quantities of asbestos include: power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is from 10 to 50 years, most people diagnosed with

Our Mesothelioma Options Help Centers have a network of top doctors/surgeons from coast to coast.

Arizona contains more naturally occurring asbestos deposits than the vast majority of states in the nation. Nearly 90% of all the asbestos deposits in Arizona can be found in the Salt River Canyon area east of Phoenix. The abundance of naturally-occurring asbestos in the state likely contributed to its widespread acceptance in a number of different industries in Arizona.
