The increased prevalence of breast cancer is also a key opportunity of market expansion. In extreme situations, this condition is prevented by mastectomy surgery, which entails the removal of the whole organ. Furthermore, regeneration of this organ is thought to be a viable therapeutic strategy for this condition. The form of the excised organ is rebuilt during this surgery. As a result of the increasing number of reconstruction cases, there will be a greater need for breast implantation in the near future.

The global breast implant market share is segmented based on type, shape, texture, application, end-use, and region. By type, it is classified into the saline implant and silicone implants. By shape, it is classified into anatomical and round. By texture, it is classified into smooth and textured. By application, it is classified into breast reconstruction and breast augmentation. By end-use, it is classified into clinics, hospitals, and others. By region, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.
