Crystals of calcium sulfate can occasionally be brick red, blue, grey, or have a reddish hue. Calcium sulfate is a typical groundwater pollutant that makes water hard and cannot be dissolved by boiling.

Gypsum, that has been calcined is used to make plasters, wallboard, lath, and tile. Gypsum, a typical building material, loses three-quarters of its water when heated and becomes the hemihydrate known as Plaster of Paris.

The chemical formula of Calcium sulfate is CaSO_4 , and its molecular weight is 136.14 g/mol. Calcium sulfate is produced from gypsum, which is a natural mineral, it is basically mined and subjected to a treatment process.

The leading calcium sulfate-producing countries are China, Iran, Thailand, and the United States. On the other hand, the top exporters are Germany and turkey.
