SHERIDAN, NEW YORK, USA, April 3, 2023

[/EINPresswire.com/](https://www.einpresswire.com/) -- According to the

latest report by IMARC Group, titled,

"Emergency Food Market: Global Industry Trends, Share, Size, Growth, Opportunity and Forecast 2022-2027", The global

emergency food market size reached a

value of US\$ 6.84 Billion in 2021. Looking

forward, IMARC Group expects the market

to reach US\$ 10.68 Billion by 2027, exhibiting a CAGR of 7.50% during 2022-2027.

Emergency food refers to the foods that are stored for consumption during emergencies and other uncertain situations. Some of the common product types include non-perishable pasteurized milk, protein or fruit bars, ready-to-eat meals, dry cereals or granola, peanut butter, infant food, dried fruits, canned juice, etc. These emergency food products offer nutritional security during disasters, such as earthquakes, floods, hurricanes, tornadoes, etc. They have all the essential nutrients that are important for maintaining proper health. Emergency food items even allow channelizing of the funds in procuring other basic needs. Consequently, they are in extensive demand across the globe.

## Emergency Food Market Trends

The launch of various favorable initiatives by the government bodies of several countries aimed at providing basic necessities to individuals during crises, including economic unrest, natural disasters, or terrorist attacks, is among the key factors driving the emergency food market. Additionally, the growing collaborations of non-governmental organizations (NGOs) with food suppliers for supporting and helping poor and needy people during uncertain scenarios are further propelling the global market.

Besides this, the increasing improvement of the infrastructure and distribution channels, especially in developing countries, and the escalating use of emergency food products in the daily diet of the working population are also positively influencing the market growth. Moreover, the elevating requirement for dried fruits and ready-to-eat (RTE) meals among army personnel who are posted in war zones with low access to food and water is acting as another significant growth-inducing factor. In line with this, the shifting preferences toward foods with longer shelf life among people living in harsh climatic conditions across countries are expected to bolster the emergency food market over the forecasted period.

#### Competitive Landscape:

The competitive landscape of the emergency food market has been studied in the report with the detailed profiles of the key players operating in the market.
