A smart display is a digital display that can be controlled by voice commands or Internet of Things (IoT) devices. In the automotive and retail sectors, for example, the smart mirror is an innovative technology capable of capturing the user's personal information and shopper's experience. Smart also includes interactive and complicated control functions as a cutting-edge technology solution. Smart display applications use LED, LCD, and other projection technologies to present pre-selected content onto the display. Smart displays are widely used in retail, sport and entertainment, and healthcare due to the increased need for next-generation advertising and monitoring technology.

Analyst View:

The smart display market is expected to grow during the forecast period, owing to an increase in demand for artificial intelligence and Internet of Things-based smart applications in the residential sector as a result of increased disposable income in developing countries. Furthermore, the market for smart displays is expected to be fueled by the demand for smart mirror systems in the vehicle industry. Furthermore, rising need for digital advertising in the healthcare, retail, and commercial sectors is likely to drive up demand for smart displays. The smart display market is predicted to grow substantially in the future as a result of these characteristics.
