Currently, market value is pegged at USD 7.2 Billion.

Definition:

The Smart Toilet market refers to the market for technologically advanced toilets that offer a

range of features beyond the basic flushing function of traditional toilets. These features may include built-in bidets, heated seats, automated lid opening and closing, personalized settings, and sensors that can detect health indicators such as glucose levels or blood pressure. Smart toilets may also incorporate advanced water-saving and cleaning technologies, as well as connectivity to other smart devices and the Internet of Things (IoT). The market for smart toilets is driven by consumer demand for more convenient, hygienic, and sustainable bathroom solutions, as well as advancements in sensor technology and the growing trend towards home automation.
