An infant incubator is a medical device that provides a controlled and protective environment for newborn infants who require specialized care. Infant incubators are used in hospitals, neonatal intensive care units (NICUs), and other medical settings to provide warmth, humidity, and oxygen to premature infants or babies with health conditions that require close monitoring.

The incubator typically consists of an enclosed bed or crib that is temperature-controlled, with walls made of transparent material, allowing caregivers to observe the baby without disturbing them. The temperature inside the incubator is carefully regulated to maintain a stable body

temperature for the baby, who may have limited ability to regulate their own body temperature.
