

# Introducing CloudCasa for Velero to Manage and Run Kubernetes Backups at Enterprise Scale

*New open-source compatible solution empowers Velero users with centralized configuration, monitoring and advanced cloud recovery*

WOODCLIFF LAKE, NJ, US, April 12, 2023 /EINPresswire.com/ -- [CloudCasa by Catalogic](#), the leader in multi-cloud

application resilience and mobility for Kubernetes and recognized as a leader and outperformer in the GigaOm Radar for Kubernetes Data Protection, today announced that it has launched CloudCasa for Velero, a new offering that combines the simplicity of the service and its advanced cloud awareness with [the benefits of Velero](#), the most popular and battle-tested open source data protection solution in the market.

CloudCasa for Velero gives enterprises and service providers the ability to scale their business with multi-cluster management for Velero backups, across all Kubernetes distributions and hybrid and public cloud environments. From a single console, developers and platform engineers can now manage and monitor their Velero-based backups with policy driven templates and guided recovery. Velero users can subscribe to the CloudCasa service and catalog their existing setup for centralized management within minutes.

"Velero is a useful tool for the backup and recovery of small and medium-sized Kubernetes environments. Okteto has over 10,000 persistent volumes today under management, and our growth has presented several management challenges," said Ramiro Berrelleza, Founder and CEO of Okteto. "With CloudCasa for Velero, we can now add enterprise-grade operations and management to our existing Velero installations to better manage and protect our customers' Kubernetes applications."

CloudCasa for Velero is designed to deliver the benefits of open source and SaaS management to enterprises using Velero, with no vendor lock-in. Velero users can centrally manage and monitor their current backups and configuration across multiple clusters and cloud providers, perform guided recoveries from both existing and new recovery points, perform cross-cloud recoveries, and address enterprise management, governance, and compliance requirements for

their Kubernetes data protection environments.

“CloudCasa and Velero have both been available as recipes in Rafay for years. While platform solutions have made it easier to deploy and configure Velero, the ongoing management and recovery guidance and support needs have been largely unmet,” said Haseeb Budhani, CEO of Rafay Systems. “It is great to see CloudCasa embrace the popular open source offering and add value on top of Velero instead of seeking to replace it.”

CloudCasa will allow free management of Velero environments with up to 15 worker nodes. A baseline supported tier is available for as little as \$199/month.

“CloudCasa has been integrating with Velero for almost three years and has utilized and adapted its resources to protect over a thousand Kubernetes environments. Velero’s success is undeniable, and we don’t see any value in converting those users to an alternate backup solution,” said Sathya Sankaran, Founder and GM of CloudCasa. “With our latest offering, CloudCasa is fully compatible and complementary to a Velero user, allowing Velero to run at enterprise scale with absolutely no disruption or migration.”

CloudCasa for Velero is available today as a new service option for CloudCasa, and it will be demonstrated at booth S14 at KubeCon + CloudNativeCon Europe 2023, that will be held April 19-21, in Amsterdam, the Netherlands.
