A software tool called a bug tracking system, also called a defect tracking system, keeps track of reported programming errors in software development projects. It might also be viewed as a particular kind of issue tracking system. A database, a key element of bug tracking software, keeps track of all information on known bugs. Additionally, a bug tracking system enables administrators to change the product's configuration in accordance with the defect's state and either remove or shift the bug to a different status.

Increased investment in the creation of cutting-edge software testing procedures is one of the major reasons propelling the global market for bug tracking systems. Any software testing program must have a bug tracking mechanism. The development of the global market for bug tracking software is anticipated to be supported by advanced testing technologies including
