

The Surrogacy Market Soars Amidst Evolving Reproductive Technologies and Changing Social Dynamics

A Deep Dive into the Global Surrogacy Market - Trends, Challenges, and Opportunities for Intended Parents and Surrogates

PORTLAND, OREGON, UNITED STATES, April 14, 2023 /EINPresswire.com/ --

Global Surrogacy Market is expected to reach \$201.4 Million by 2025, growing at a CAGR of 6.1% (2016-2025). This growth trajectory demonstrates the increasing acceptance and demand for surrogacy as a viable reproductive option for couples facing infertility or other reproductive challenges.

Surrogacy, a practice where a woman carries a pregnancy on behalf of another individual or couple, has gained traction as a solution for those struggling with infertility, same-sex couples, and individuals who are unable to carry a pregnancy due to health reasons. Advancements in reproductive technologies and changing social norms have contributed to the growing acceptance and adoption of surrogacy as a means to achieve parenthood.

For instance, the American Society for Reproductive Medicine (ASRM) issued recommendations on March 17, 2020, advising against initiating new cycles of assisted ovulation, intrauterine inseminations (IUIs), in vitro fertilization (IVF), or "non-urgent" egg freezing. This has led to delays or cancellations of surrogacy cycles, as well as challenges in finding suitable surrogates and proceeding with the surrogacy process as planned.
