Disposable gloves are single-use gloves made from various materials such as latex, nitrile, or vinyl, that are designed to protect the wearer's hands from contact with potentially infectious substances or hazardous chemicals. They are commonly used in medical and healthcare settings, food handling and preparation, and in other industries where hand protection is necessary.

Disposable gloves come in various sizes and thicknesses, and are usually available in powdered or powder-free forms. Powdered gloves are coated with a fine powder to make them easier to put on and take off, while powder-free gloves do not have any powder and are preferred in

certain applications where powder contamination must be avoided.
