[Turbine Market](#) Study by in-depth

analysis of the current scenario, the Market size, demand, growth pattern, trends, and forecast period 2023-2030.

The dental turbine is a dental abrasive device that rotates at high speed and uses compressed air as the driving force. It is characterized by its small size, lightweight, and painless abrading due to its high-speed rotation, but its

torque is small and noise level is high. A dental handpiece is a hand-held, mechanical instrument used to perform a variety of common dental procedures, including removing the decay, polishing fillings, performing cosmetic dentistry, and altering prostheses. The handpiece itself consists of internal mechanical components which initiate a rotational force and provide power to the cutting instrument, usually a dental burr.
