Ambulatory Blood Pressure Monitoring (ABPM) Devices are portable medical devices that measure blood pressure over a 24-hour period while a patient goes about their normal daily activities. The device is typically worn on a patient's wrist or arm and consists of a blood pressure cuff that inflates and deflates at regular intervals to measure blood pressure.

ABPM devices are used to diagnose and monitor hypertension (high blood pressure), a condition that affects millions of people worldwide and is a major risk factor for cardiovascular disease. ABPM provides more accurate blood pressure readings than a single blood pressure

measurement taken in a doctor's office, as it takes into account variations in blood pressure that occur throughout the day.
