

Urolife Stone Hospital - Leading the Way in Kidney Stone Treatment In Delhi

With a focus on quality patient care, Urolife Stone Hospital is committed to providing the best possible treatment for kidney stones.

NEW DELHI, DELHI, INDIA, April 19, 2023 /EINPresswire.com/ -- Kidney

stones are a common health problem

affecting millions of people worldwide. They are formed when substances in the urine such as calcium, oxalate, and uric acid crystallize and stick together. While some stones pass out of the body naturally, others require medical intervention.

“

Most patients ,upto 87 % are treated Non surgically by intensive treatment planning and using soundwaves and Laser technology for stone fragmentation”

Dr Rahul Yadav (Chief Consultant and Director)

For those suffering from kidney stones, Urolife Stone Hospital is a beacon of hope. Founded in 2002, the hospital is a leading speciality centre for Non Surgical kidney stone removal in India. Located in the heart of Delhi, the hospital is easily accessible and has state-of-the-art facilities including Lithotripsy with Ultrasound guided treatment.

This additional technology in the Lithotripsy unit saves the patient with additional radiation and shows real-time stone fragmentation of even small stones.

The hospital's mission is to provide affordable, comprehensive & compassionate care to patients with kidney stones. They offer a wide range of services, including diagnosis, treatment, and prevention of kidney stones.

Diagnosis

One of the key strengths of Urolife Stone Hospital is their diagnostic capabilities. They have a team of experienced urologists who use the latest technology to accurately diagnose kidney stones. The hospital is equipped with a range of diagnostic tools, including ultrasound, CT scans, and X-rays. This ensures that patients receive an accurate diagnosis, which is critical in developing an effective treatment plan.

Treatment

Once a patient has been diagnosed with kidney stones, the hospital's team of urologists develops a personalized treatment plan keeping in view the non-surgical approach as far as possible. They offer a range of treatment options, including [shockwave lithotripsy](#), ureteroscopy, percutaneous nephrolithotomy, and laparoscopic surgery.

Shockwave lithotripsy is a non-invasive procedure that uses shock waves to break up kidney stones. This is a popular treatment option for smaller and medium-sized stones up to 27 mm.

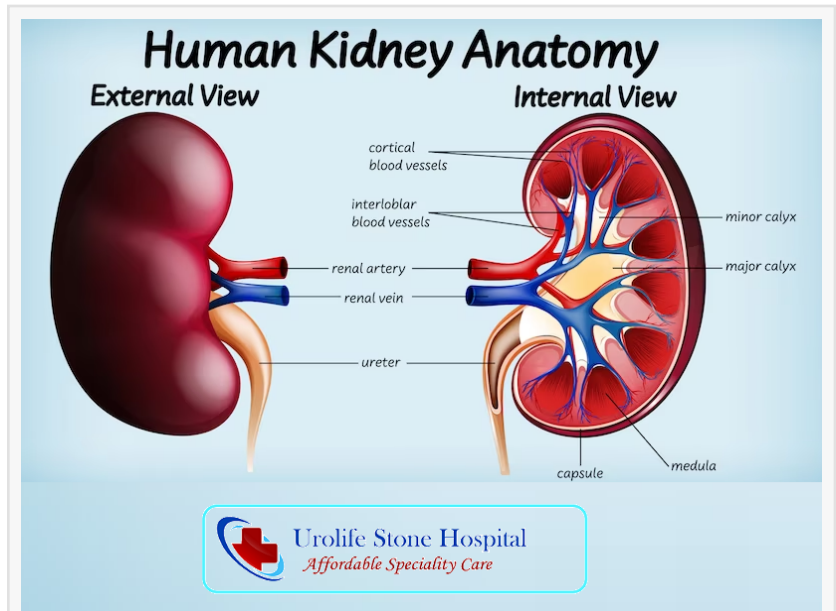

Ureteroscopy is a minimally invasive procedure that involves passing a small scope through the urethra and bladder to the stone in the ureter or kidney. The stone is then either removed or broken into smaller pieces using a laser.

Percutaneous nephrolithotomy is a minimally invasive surgical procedure that involves making a small incision in the back and using a scope to remove the stone.

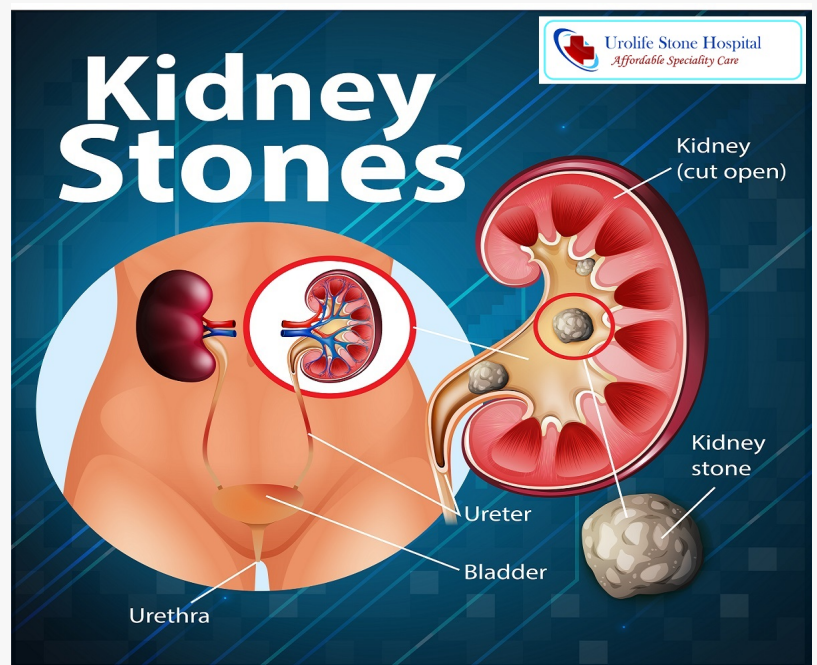

Laparoscopic surgery is a minimally invasive procedure that involves making small incisions in the abdomen and using a camera to guide the surgeon in removing the stone.

Prevention

Preventing kidney stones from recurring is essential for patients' long-term health. Urolife Stone Hospital has a team of specialists who work with patients to develop a personalized prevention plan. This plan may include dietary changes, medication, and lifestyle modifications. By taking proactive steps to prevent kidney stones from forming, patients can enjoy a better quality of life.
