□□□□□□ □□□□□□□□:

Acne or acne vulgaris is a skin disease caused due to clogging of hair follicles with dead skin cells and oil from skin cells. This disease is characterized by pimples, blackheads, oily skin, and scarring. There are two types of acne including non-inflammatory and inflammatory acne, where the latter takes longer duration to heal and can cause permanent effects on skin. It generally affects skin with comparatively high number of sweat glands such as upper part of chest, back, and face. Acne medications are drugs that are indicated for treatment of acne. These include several prescription and over-the-counter medicines such as retinoids, isotretinoin, antibiotics, salicylic acid, benzoyl peroxide, and oral contraceptives.

- Pharmacies & Drug Stores
- E-Commerce

Based on geography, North America generated the highest share in 2019, garnering nearly half of the global acne medication market, due to numerous developments related to acne therapeutics. Simultaneously, Asia-Pacific would manifest the fastest CAGR of 4.9% from 2020 to 2027, owing to increase in number of product launches, high demand for acne therapeutics, surge in healthcare expenditure, and rise in awareness about new developed therapeutics that can replace conventional acne treatment.
