Tobacco Market

Tobacco is a plant that belongs to the Solanaceae family and is widely used for smoking, chewing, or snuffing. It contains the addictive substance nicotine that is responsible for increasing blood pressure and raising heart rate. Dried tobacco leaves are primarily used in the production of cigarettes, cigars, and pipes. While being extremely popular, tobacco consumption is widely associated with adverse health and severe addiction in some cases.

Global Tobacco Market Trends:

The increasing number of smokers represents one of the key factors across the globe. In line with this, the continual launch of premium tobacco products, including flavoured, long and skinny, coloured, and e-cigarettes, by the manufacturers is contributing to the market growth.

Moreover, rising health consciousness has led to the introduction of product variants with reduced level of toxicants. This is acting as a major growth-inducing factor. In addition to this, the easy availability of the product across distribution channels in various forms and often at affordable price point is also facilitating the product sales, thus driving the market growth. Other factors, such as rising disposable income and consumer expenditure capacities, aggressive promotional activities undertaken by leading players, and extensive research and development (R&D), are creating a positive outlook for the market further across the globe.
